Conversations in Care - The Single Ventricle

PROGRAM DESCRIPTION

We are ditching the PowerPoint! This CME activity is an exciting series of live, interactive conversations between expert imagers, surgeons, interventionalists, and other sub-specialists.

With the goal of creating a shared mindset between the imager, multi-disciplinary colleagues, each conversation will focus on how each procedure is performed, what the proceduralists needs from the imager, and how best to image the patient in order to prepare the proceduralist for the intervention.

This year's conference will focus on common and controversial questions that arise in the care of persons with single ventricle physiology from prenatal life onward.

Each conversation will include quick tips on the most pertinent imaging pearls as well as a clinical case and an extended Question and Answer session.

LEARNING OBJECTIVES

At the conclusion of this activity, participants will be able to:

- Understand how to image fetuses with single ventricle anatomy, counsel families and coordinate with Maternal Fetal Medicine.
- Explain how to image patients before and after the Glenn and Fontan procedures in order to optimize surgical outcomes and diagnose complications.
- Describe how to image adolescent and adult patients with Fontan physiology to assess and manage hepatic and cardiac sequelae.

WHO SHOULD ATTEND

Physicians, trainees, sonographers, nurse practitioners and physician assistants in the fields of congenital cardiology, cardiac surgery, obstetrics, perinatal medicine and radiology.

Agenda
