GOALS & OBJECTIVES

At the conclusion of the symposium, participants will be able to:

- Evaluate emerging evidence and landmark studies in medical, surgical, cosmetic dermatology, and dermatopathology and incorporate relevant findings into clinical practice
- Apply current evidence-based diagnostic and therapeutic strategies for medical dermatological conditions, including alopecia areata, psoriasis, eczema, actinic keratosis, rosacea, and skin cancer
- Compare contemporary surgical techniques, including closure methods and cosmetic procedures, and intergrate appropriate approaches into clinical practice
- Assess new cosmetic agents, including fillers and neurotoxins, and apply evidence-based injection techniques to enhance procedural safety and treatment outcomes
- Evaluate live patient demonstrations utilizing approved treatment of photodamage and age-related skin changes and identify techniques that optimize procedural planning and patient selection
- Differentiate the clinical presentation and management considerations of psoriasis, eczema, and dermatitis to support accurate diagnosis and treatment selection
- Apply updated guideline recommendations and evidence-based management strategies for patients with actinic keratosis
- Incorporate emerging therapies and evolving treatment paradigms for vitiligo and cutaneous lymphomas into patient care planning
- Assess the epidemiology, associated risk factors, and clinical implications of alopecia areata to support earlier diagnosis and individualized management strategies

WHO SHOULD ATTEND?

Dermatologists, cosmetic surgeons, physician assistants, nurse practitioners, residents, fellows, medical students, and other allied health professionals.
