Course Description

The goal of this program is to provide participants with a broad overview of the most common disorders of the musculoskeletal system that they frequently encounter in the outpatient setting. Emphasis will be placed on physical exams, diagnosis, and treatment of musculoskeletal disorders. Lectures will cover the diagnosis and non-surgical management of common conditions of the musculoskeletal system. Workshops will be offered in musculoskeletal examination, injection techniques, splinting methods, and imaging interpretation.

Objectives

At the conclusion of this CME course the participant should be able to:

- Evaluate the most common and most frequent musculoskeletal injuries
- Explain the pathophysiology and treatment plan of various diagnoses to the patient
- Apply appropriate management and treatment for each diagnosis
- Apply basic physical exam, injection, and splinting techniques
- Identify those patients who need referral to physical therapy and who need referral to a specialist
- Interpret and order appropriate imaging studies

Target Audience

Internists, Family Physicians, Physiatrists, Physical Therapists, Physician Assistants, Rheumatologists, Neurologists, Geriatricians, Emergency Room Physicians, Residents, Nurse Practitioners, Chiropractors, Individuals in Allied Health Positions
