PROGRAM DESCRIPTION

This full-day annual symposium provides clinicians in the tri-state community with a comprehensive update of treatment approaches to the diagnosis and management of movement disorders. A broad spectrum of diseases including Parkinson disease (motor and non-motor symptoms, including cognitive and psychiatric), atypical parkinsonian conditions, tremor, dystonia, and chorea will be addressed. Through video review, didactic lecture, and interactive discussions with expert clinicians, attendees will learn about current medical and cutting-edge diagnostic and management options including local injections of botulinum toxin and deep brain stimulation (DBS).

LEARNING OBJECTIVES

- **Recognize** the clinical presentations (abnormal movements) that characterize movement disorders.
- **Recognize** the clinical syndrome of dystonia, list current treatment approaches including local injections of botulinum toxin and deep brain stimulation (DBS), and discuss genetic testing and its implications.
- **Describe** an appropriate movement disorder candidate for DBS (deep brain stimulation) surgical intervention.
- **Devise** an appropriate management strategy for the patient with advancing Parkinson disease, including management of cognitive, psychiatric, and other non-motor symptoms.
- **Describe** the assessment and management strategy for a patient with chorea.
- **Discuss** the clinical diagnostic criteria for atypical parkinsonian disorders and current treatment options.
- **Differentiate** between the various types of tremor seen in patients with Parkinson disease, essential tremor, and dystonia.

Who Should Attend?

General neurologists, neurosurgeons, primary care physicians, psychiatrists, rehabilitation physicians, neurology nurses, physician assistants, movement disorder fellows, and neurology residents.

Accreditation
